

# WEEKLY HARVEST REPORT

Week ending 30 October 2016

South Australian total	Week ending 30 Oct 2016*	Total 2016/17 harvest**
	30,712 tonnes	33,977 tonnes

## South Australian overview

Receivals have picked up over the past week with 30,000 tonnes of grain delivered into Viterra sites.

Deliveries increased throughout the week, with the largest receival day being Saturday 29 October with more than 7000 tonnes.

Receivals have been mainly in the Western region, which has had 89 per cent of the state's total.

Viterra's Export Select rates have reduced for the fourth year running, helping cut the costs of exporting grain for both growers and marketers.

The rates have once again been adopted by Grain Trade Australia (GTA) as the GTA Location Differentials for the 2016/17 season.

Growers can find the Export Select rates at [viterra.com.au/storage-handling/harvest-2016-17/grower-resources-2](http://viterra.com.au/storage-handling/harvest-2016-17/grower-resources-2)

Securing harvest shipping has allowed all growers to deliver APW1, ASW1, NIPT1 and PEAK into Inner Harbour until further notice. All other grades are open for local growers only.

Western region receivals	Week ending 30 Oct 2016*	Total 2016/17 harvest**
	27,255 tonnes	30,163 tonnes

A range of commodities have been received at Western region sites, including barley, wheat, peas, canola and lupins.

Construction of about 385,000 tonnes of additional storage at sites across the Eyre Peninsula has been progressing well and will be ready for the peak of harvest.

Harvest shipping has allowed all growers to deliver F1 direct into Port Lincoln.

Central region receivals	Week ending 30 Oct 2016*	Total 2016/17 harvest**
	3,458 tonnes	3,814 tonnes

A small number of growers have started harvest in the Central region with barley, wheat and peas making up the total receivals so far.

The warmer weather last week was very welcome, with the cool and damp weather on the weekend steadying things down again.
