

WEEKLY HARVEST REPORT

Week ending 6 November 2016

South Australian total	Week ending 6 Nov 2016*	Total 2016/17 harvest**
	174,847 tonnes	208,824 tonnes

South Australian overview

Grain receivals are now underway across all regions with more than 174,000 tonnes delivered into Viterra sites over the past week. Receivals into the network ranged from 10,000 tonnes to 40,000 tonnes per day.

Drier conditions meant more growers could start harvesting with many Viterra sites extending their opening hours for receivals during the warmer weather.

Viterra has modified its receival process for barley to reflect growers' use of glyphosate while still protecting South Australia's market access.

The Australian Pesticides and Veterinary Medicines Authority (APVMA) approved a [permit](#) to allow the use of glyphosate on barley (except malting barley) from 2 November 2016.

For more information on the changes to glyphosate on barley, visit the [Viterra website](#) or see the documents below.
